The information presented here is current and accurate to the best of our knowledge at the time of printing. **ALWAYS** verify weight applications by using the Alloy Wheel Gauge and by careful visual inspection of the installed weight for proper and secure fit.

WHEEL WEIGHT SELECTION SYSTEM – IMPORTANT! Alloy wheels come in a variety of rim styles. To insure proper, secure fit, selection of the proper weight is necessary. Our exclusive color-coded selection system makes correct application easy. We recommend the following procedure:

1. Use this color-coded application guide to select OEM weight type.
2. Verify application with color-coded rim gauge.
3. Select correct Aluma-Guard™ coated weight. Box labels are color-coded to match application guide and rim gauge.
4. Use color-coded wheel weight management system for storage of weights.

NOTE: For aftermarket or special OEM wheels, use the rim gauge to determine the best fit, or use Tape-A-Weight (TAW) adhesive weights.

POLYCAST® WHEELS: This wheel is steel with a cast polymer outside facing to resemble alloy wheels. Use alloy weights on outside flange, and Thinline weights for steel inside flange.

CHROME PLATED ALLOY WHEELS: Tape-A-Weight 9405-C chrome plated weights are recommended.

The primary weight listed is the weight for most common OEM wheels on this vehicle.

The secondary weight listed is a likely choice for optional or upgrade OEM wheel packages or other wheels where the primary weight isn't appropriate. If still unsure, use the rim gauge to make your selection.

COLOR CODES/WEIGHT TYPES

Weight Type	Unit	Color Code
ALC	ounce	Red
ALCMC	ounce	Yellow
ALCIW	gram	Blue
ALCEN	gram	Green
ALCFN	gram	Orange
ALCLH	ounce	Purple
TTC	ounce	Grey
